Education

Annasaheb chudaman patil college of engineering , India

2020 - 2024

● Branch: Information technology | CGPA: **8.71**

Skills

Python | Huggingface | Ollama | Vllm | Fine-tuning | Voice Agents | Transformers | OCR | Runpod | AWS | LLM | Prompt Engineering | RAG | AI Agents | LangChain | NLP | Docker | React.js | Nodejs | Machine Learning | JavaScript | Java | Next.js | Postgres SQL | Git & Github | MonogoDB | HTML | CSS | Collab | IOT

Works and Experience

Logicloop | Gen AI Software Engineer

Oct 2025 - Present

- Built Python automation and AI agents using opensource AI models.
- Improved API performance and system reliability.
- Developed scalable AI agents and used latest tech like cloud, agentic AI, RAG etc and many AI methadologies
- Contributed in Company's open-source project and worked with their AI model as well which included prompt_template, agentic workflow, mcp_tools etc and more advance terms.
- FineTuned a model on personal data mitigated maximum data loss using LoRA and unsloth methods.

Freelance Software Developer

(Jan 2023 - Oct 2025)

Worked with companies like **TT Infotech and Akrix**

- Delivered full-stack web and mobile applications with AI integration, including intelligent automation, chatbots, and AI agents for real-world business use cases.
- Designed and deployed scalable systems (ERP, CRM, service platforms) with AI-driven analytics, improving operational efficiency and user engagement.
- Collaborated with multiple clients to build production-grade solutions, integrating APIs, payment systems, and AI- based decision-making features.

Internships

IDBI Intech Ldt | Machine learning engineer intern

Dec'22 - Jul'23

- Developed and implemented machine learning algorithms for real-world projects, driving accuracy and efficiency improvements .
- Collaborated with cross-functional teams to gather requirements and design machine learning models to solve complex problems.
- Designed and executed data preprocessing pipelines, cleaning and transforming large datasets for training and testing purposes.

Projects

Vighnaharta Online Services - (<https://vighnahartaonlineservice.in>)

- Built an AI-enabled digital services platform integrating BBPS, NSDL PAN, and 100+ services with real-time tracking and automated workflows.
- Implemented AI-driven document verification and smart form automation to reduce manual processing and improve service efficiency.
- Developed intelligent dashboards using AI insights for transaction analytics, user behavior tracking, and commission optimization .

Venue OCR service

- Worked with the team to create a scalable backend which extracts the Handwritten text from the image.
- Used various Technologies like **Python, Celery worker, Redis(broker), PostgreSQL(database), AI model, Runpod cloud(serverless), Vllm , docker etc** were used.
- Tested various AI models and tweaked with various parameters and prompt to get the maximum accuracy as well as deployed it on cloud(runpod) serverless instance using docker image and using the endpoint in project.

Email-Agent

- worked with the team and collaborated to create a automated system.
- Used various Technologies like **Python, FastAPI, SQLite, Open AI key, RAG , AWS bedrock etc** were used.
- The project used to see the complain mails and raise the ticket directly automatically and also seperates the mail in 4 types accordingly.
- Contributed by adding the new feature that supports AWS bedrock models and embeddings and various files attachments.

MCP-master

- Created a Chat-GPT styled project with multiple MCP tools like gmail, calender, todolist etc and much more using Oauth and connected it to llm so we can perform task via LLM.
- Used various Technologies like **Python, FastAPI, SQLite, Open AI key, Composio, React(frontend) etc** were used.
- Created Admin panel which can add MCP tool and set permission dynamically to all users.
- Used JWT authentication and standard practices to build and highly scalable AI application.

Health-Agent

- Created a Chat-GPT styled project where user could upload the require documents based on medicine and report so our agent can analyze and give personalized yet accurate information to user accordingly
- Used various Technologies like **Python, FastAPI, SQLite, Open AI key, Agno, Streamlit, RAG etc** were used.
- Could suggest medicines, home remedies and identify the possible disease or outcome from report.

Hobbies

Painting (won several taluka and college level compitition), **Sketching, Art&Craft, Swimming, Photography**

Certificates

JAVA-DSA-OOP(UPGARD), AWS BUILDER SERIES(2022),JAVASCRIPT, BOOTSTRAP(UDEMY)
